

Introducing the “Smart Move” Screen

A world leading product that overcomes one of the main problems we encounter - Customers often want extra drop on their screen to cope with very high ceilings or stage settings. This can be done but, long fabric tends to curl and of course the casing is often in the way of stage lighting.

Our new screen has two motors to enable the casing to be dropped up to 5 metres on the metal wires built into it. The drop can be adjusted from the remote control at ground level meaning very easy installation. You can set it to one button control to drop the casing and also let the projection fabric out of the casing. Power is via a supplied reel which is fitted at roof level and then allows the power to unwind as the screen drops. As it retracts back the coil roles back the electric lead. All you need is a one gang plug at roof level to power this screen.
